EXPERIMENT-6

Name: Sruthi Dinesh
Roll No. : 240701536
Dept. : Computer Science and Engineering
Subject: User Interface Design
Subject Code: CS23A34

Phase 1: Requirements Planning

This phase defines the goals, features, and user needs of the shopping application. Stakeholders, developers, and designers decide what should be included in the system.

1) Identify Key Features

Navigation:

- Home
- Product Categories
- Product Listings
- Product Details
- Cart
- Payment
- Order Confirmation

User Actions:

Browsing products, selecting categories, viewing product details, adding items to cart, purchasing products, making payments.

2) Create a Requirements Document:

1. View available product categories
2. Browse products under each category
3. View detailed information of selected product
4. Add products to cart or wishlist

5. Buy product directly using Buy Now option
6. Choose payment method
7. Confirm successful order placement

Phase 2: User Design

In this stage, users and designers work together to create wireframes and prototypes that show the system layout and navigation flow before coding begins.

1) Tools Used:

- Axure RP / Figma for designing UI wireframes and prototypes

2) Wireframes Designed:

Home Page:

Displays featured banner and main shopping categories:

- Fresh Fruits
- Veggies
- Pantry Essentials
- Ready to Eat

Product Listing Page:

Shows products under Fresh Fruits category:

- Papaya
- Pineapple
- Apple
- Avocado
- Strawberries
- Bananas

Product Details Page:

Displays:

- Product image

- Product name
- Description
- Add to Wishlist button
- Add to Cart button
- Buy Now button

Payment Page:

Provides payment methods:

- UPI / Internet Banking
- Credit Card / Debit Card
- Cash on Delivery
- Confirm Payment button

UI Design Activities:

- Created navigation links between pages
- Reused buttons, headers, and cards
- Added labels and clean layout structure
- Used simple shopping-friendly interface

Phase 3: Construction

This phase focuses on prototype development with testing and improvements based on feedback.

1) Interactive Prototypes:

Created working navigation flow:

Home → Fresh Fruits → Product Details → Buy Now → Payment → Order Confirmation

2) Dynamic Elements:

- Category navigation buttons
- Product selection screens
- Add to Cart and Wishlist actions
- Buy Now direct purchase flow

- Payment option selection

3) Testing and Iteration:

- Prototype tested in preview mode
- Checked user-friendly navigation
- Improved alignment, spacing, and readability
- Refined button placement and visual design

Phase 4: Cutover

Final stage where the prototype is completed and prepared for deployment or development handoff.

1) Finalization and Export:

- Final prototype shared with stakeholders
- Screens ready for frontend development
- Can be converted into HTML/CSS/Flutter/Android code

2) User Training & Support:

- Demonstrated complete shopping flow
- Provided screen explanations for developers
- Shared comments and feedback for future updates
- Easy maintenance and feature expansion possible

Final Application Flow:

Home Page → Select Category → View Products → View Product Details → Add to Cart / Buy Now → Payment → Order Confirmation

HOME

Fresh Fruits

Veggies

Pantry Essentials

Ready To Eat

FRESH FRUITS

Papaya

Pineapple

Apple

Avocado

Strawberries

Bananas

AVOCADO

Rich , Fresh , Buttery and Creamy

Pro Tip- Make some fresh guacamole with some onion and some cilantro.
